PROFESSIONAL SUMMARY

Full-Stack Web and Mobile Developer experienced in delivering customer-facing products with React, Django, Django REST Framework, databases, and responsive interfaces. Built the full feature set for a live customer product available on the web and Android, and built the frontend for a live tourism platform with Arabic/RTL support. Also develops technical projects involving e-commerce, REST APIs, deployment, and full-text search.

PRODUCTION EXPERIENCE

Full-Stack Web and Mobile Developer	Live production product
Mizan / formerly StarBinance — Customer Product	<i>Remote</i>
- Built and delivered the full feature set for a live customer-facing product across web and Android. - Worked across frontend screens, backend-connected workflows, business logic, user flows, and production implementation. - Delivered a product available through the live web experience and Android application package <code>com.mizan.ap</code>. - Implemented customer requirements as usable product features and supported production delivery. - Add exact features here only if personally implemented and verified, such as authentication, dashboards, referral logic, admin functionality, API integration, or deployment.	

Frontend Developer	Live production project
Bedouin Trails — Customer Project	<i>Remote</i>
- Built the frontend experience for a live tourism platform focused on Egyptian desert and safari trips. - Implemented responsive layouts, navigation, tour discovery, destination and tour presentation, FAQ content, and customer contact paths. - Supported Arabic/RTL presentation and a multilingual user experience. - Delivered production-facing pages that help visitors explore tours, read trip information, and start an inquiry or booking journey.	

SELECTED PROJECTS

Developer , Basic Index-Based Search Engine	github.com/mohanad66/Basic-Index-Based-Search-Engine
- Built a Django REST Framework backend and React frontend for an index-based search engine. - Used SQLite FTS5 full-text search with an inverted index and BM25 relevance ranking instead of simple substring scanning. - Implemented Porter stemming, unicode61 tokenization, prefix matching, and relevance-ordered results.	

Full-Stack Developer , Full Market Store	github.com/mohanad66/Dream-Project
- Built a full-stack e-commerce platform combining React with Django-backed business logic and API workflows. - Implemented product browsing, customer-facing store flows, frontend/backend integration, and database-backed functionality.	

Backend / Full-Stack Developer , Fake Market Store Django	github.com/mohanad66/Fake-Market-Store-Django
- Built a Django e-commerce project with product and order-related backend functionality. - Worked with Python, Django, Stripe-related payment functionality, PostgreSQL, and server-side business logic.	

EDUCATION

[School or institution]	[City, Country]
[Program, degree, or current study level]	[Start year — Expected graduation year]
Add relevant coursework, awards, or academic achievements only if useful for the target role.	

CERTIFICATIONS

Frontend with React , Manara	[Year]
Web Development , DECI	[Year]
